

SMART INDIA HACKATHON 2026

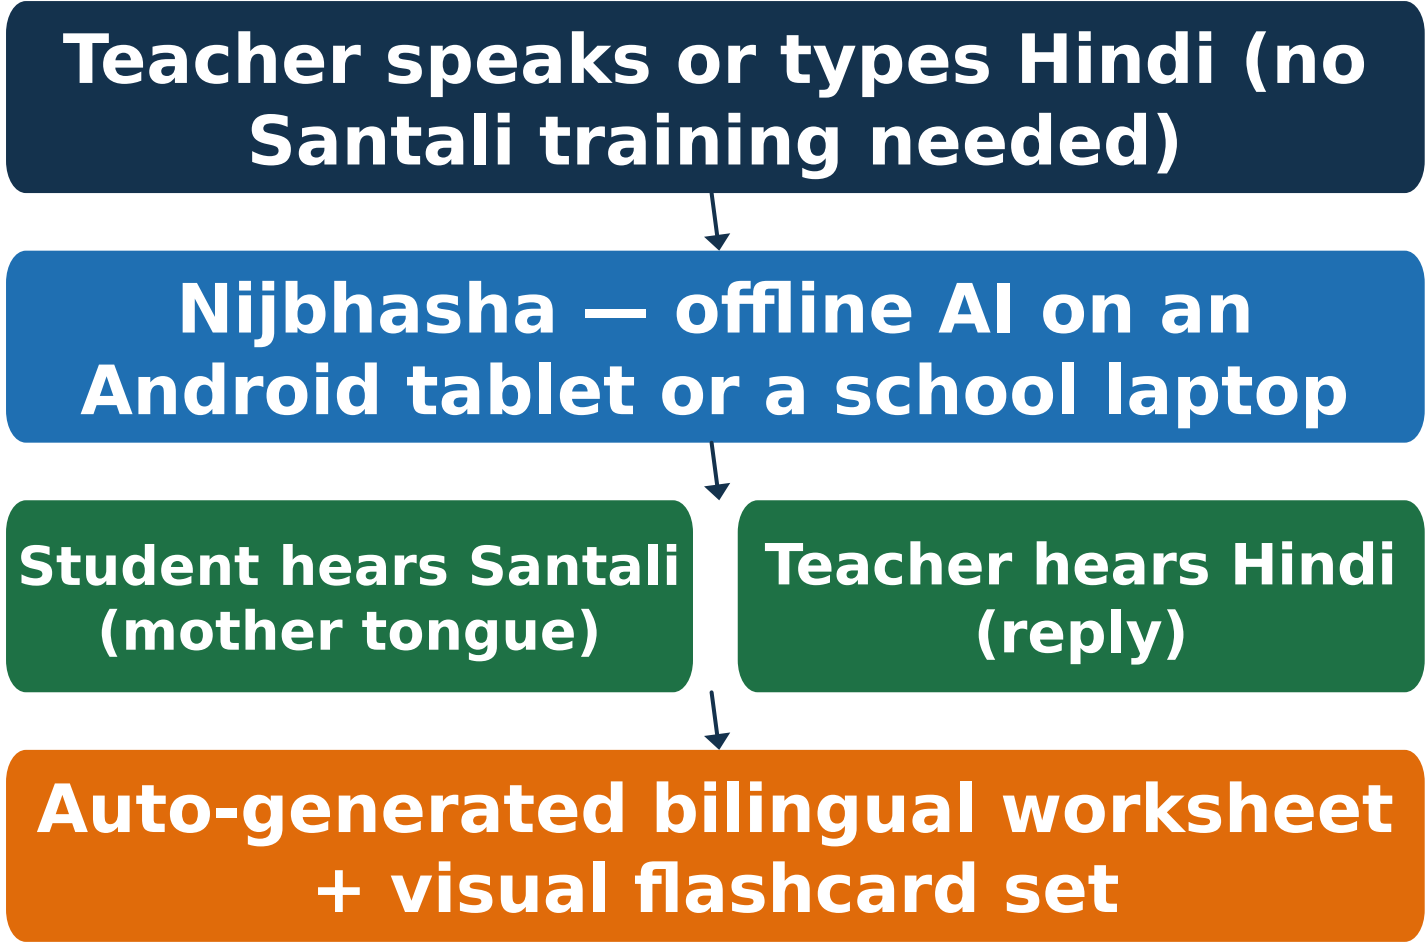

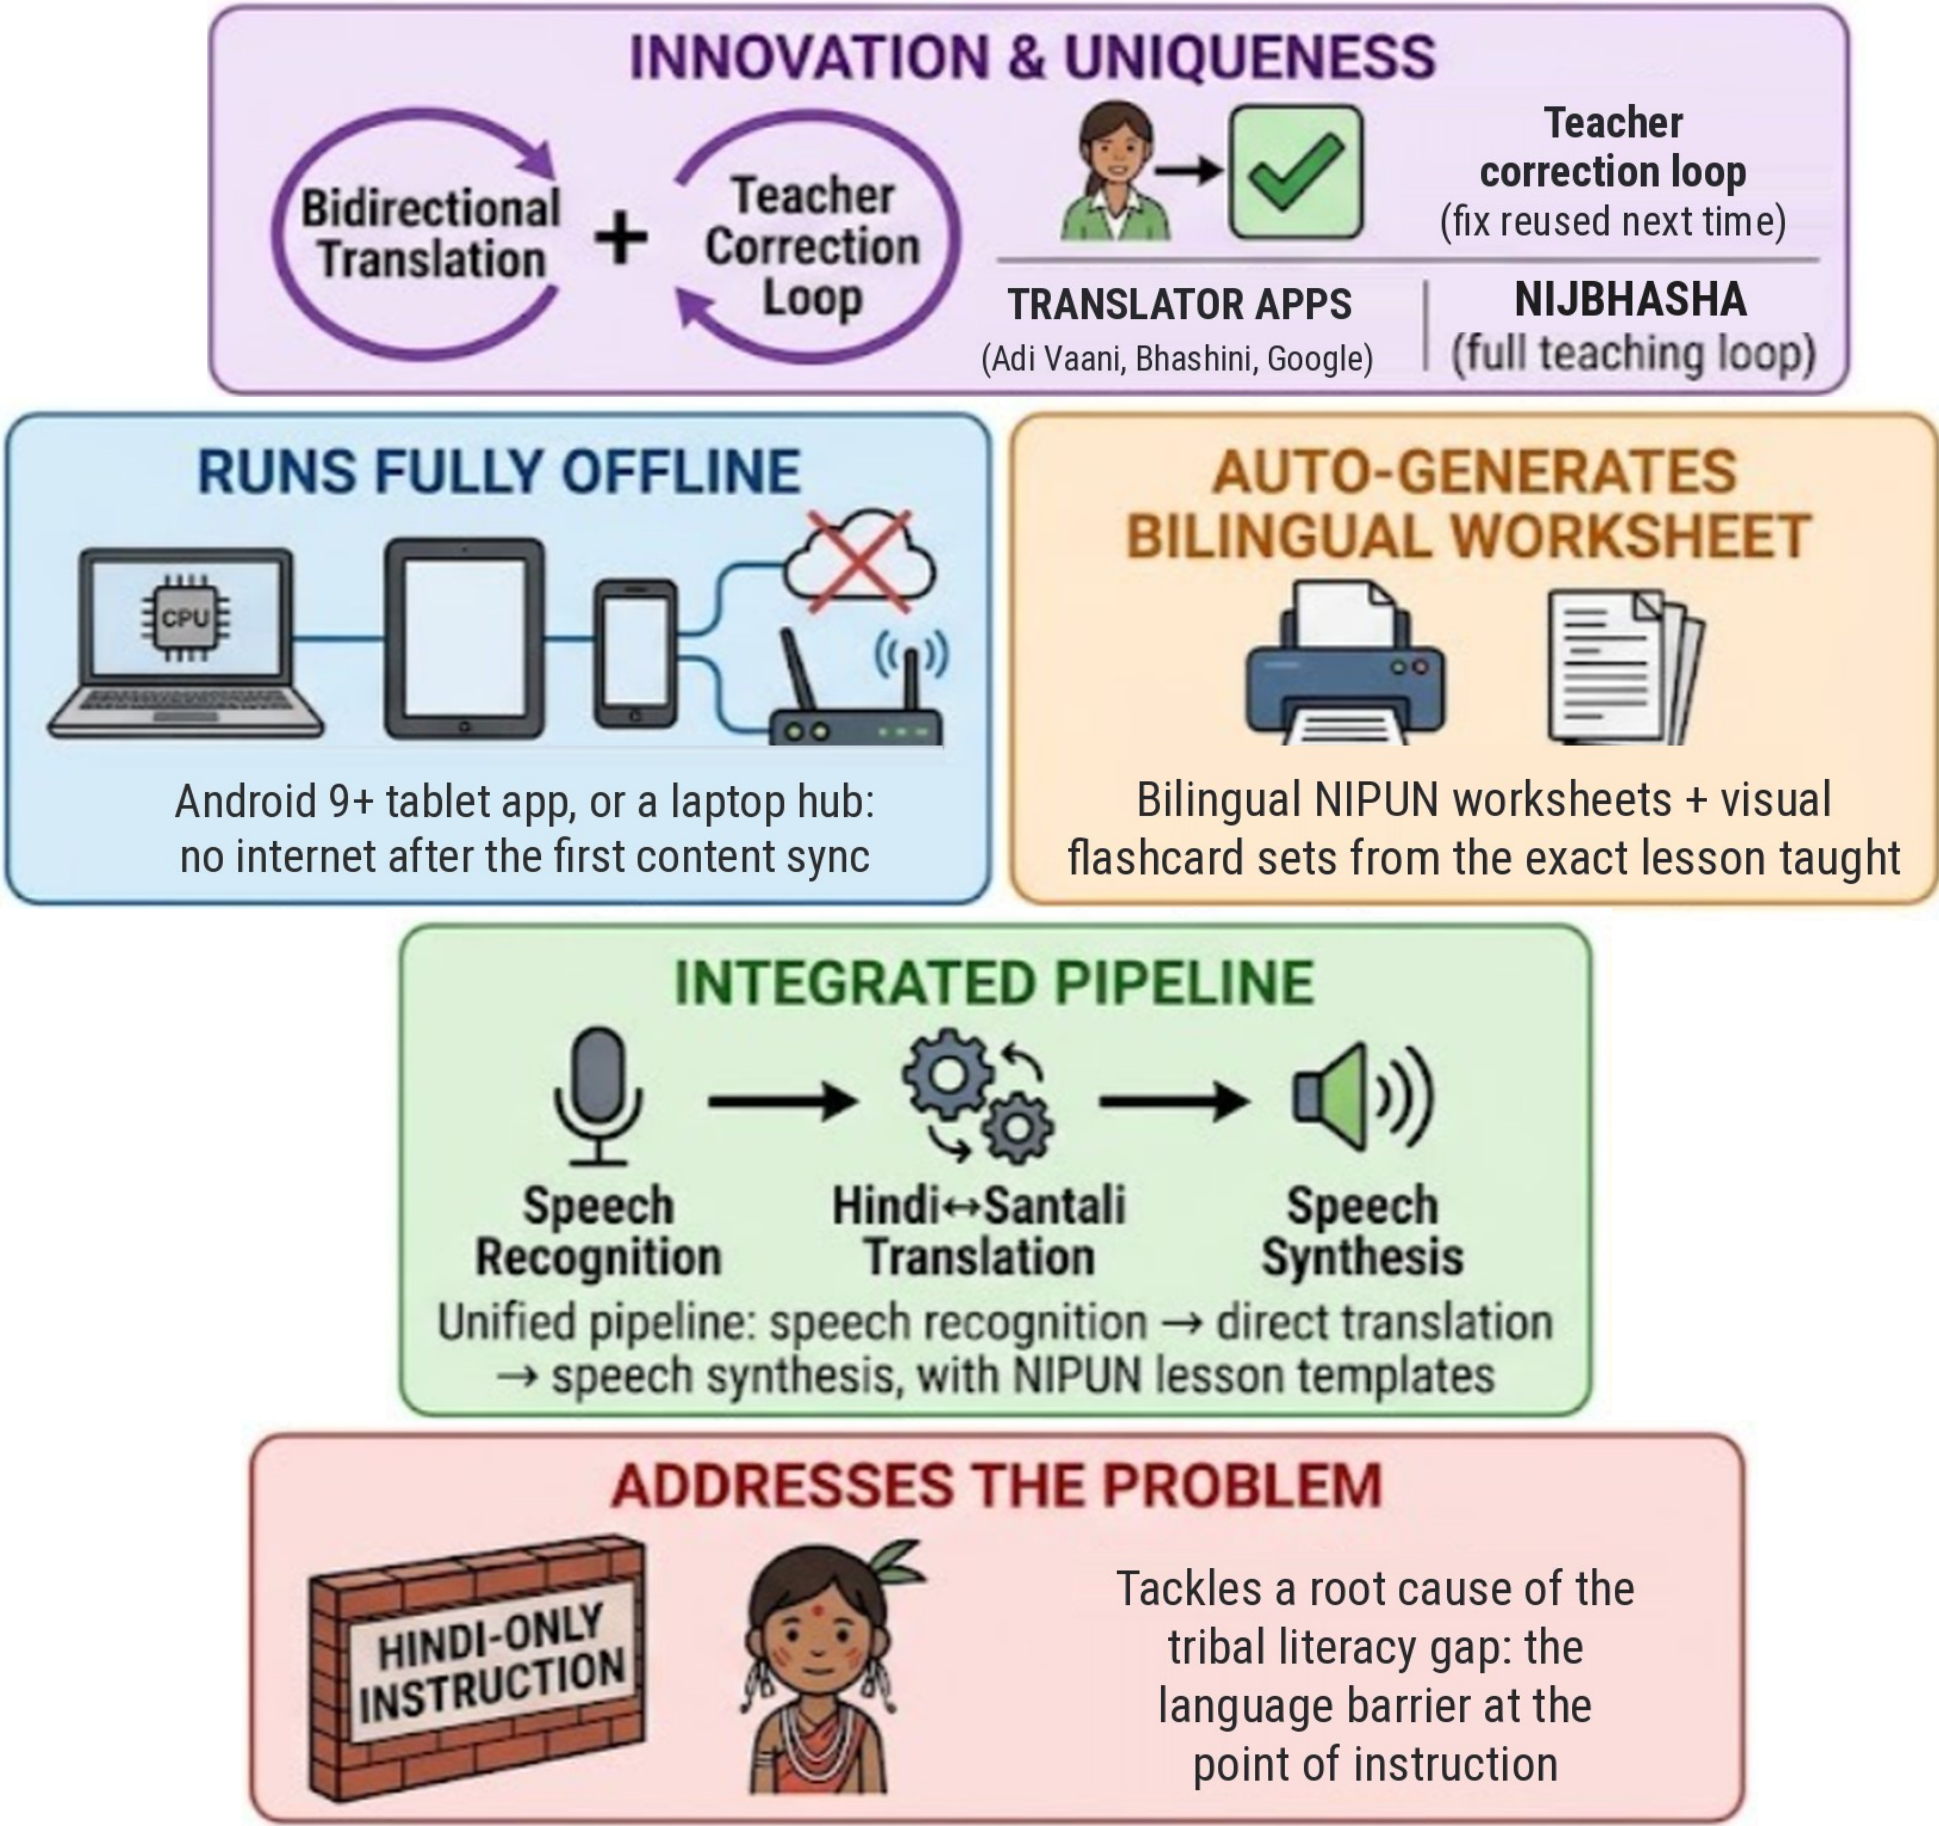

SMART INDIA
HACKATHON
2026

- **Problem Statement ID - SIH26042**
- **Problem Statement Title- AI-Powered Vernacular Pedagogy and Real-Time Translation Tool for Mother Tongue-Based Primary Education**
- **Theme- Smart Education**
- **PS Category- Software**
- **Team ID- 168531**
- **Team Name (Registered on portal) - VITV 8-bitPool**

Nijbhasha — Proposed Solution

- What Nijbhasha adds over translation apps**
- Adi Vaani (MoTA), Bhashini and Google Translate translate text. Nijbhasha runs the whole lesson:
- ✓ Lesson script → speech → comprehension check
 - ✓ Bilingual NIPUN worksheet + flashcards from that lesson
 - ✓ Teacher corrections reused next time
 - ✓ Offline on an Android tablet in airplane mode

• WHAT'S BUILT & RUNNING TODAY

- Android app (Android 9+): lessons, worksheets, spoken lesson lines and typed translation, offline
- Laptop hub: Flask API + one HTML page; tablets join over Wi-Fi
- Real models live: speech recognition, translation, synthesis
- Hindi / Santali / English UI; 18 NIPUN lessons, Balvatika–Grade 3

• THE AI PIPELINE — INTEGRATED, NOT PLANNED

- ASR: IndicConformer — 600M on the hub, 120M int8 on the tablet
- NMT: IndicTrans2 320M, direct Hindi ↔ Santali, no English pivot
- TTS: Piper voice reads Santali via our Ol Chiki transliterator
- Offline: sockets-off laptop test; tablet tested in airplane mode
- Santali live; Mundari translation preview; Ho voice preview

Methodology and process for implementation

TEACHER INTERFACE

- Voice or typed input (Hindi)
- Lesson script mode
- Activity + assessment modes
- One-click worksheet download
- Android tablet app, or laptop browser
- Signed content sync, then no network

AI ENGINE — OFFLINE

- Hindi + Santali ASR — IndicConformer
- NMT — IndicTrans2, direct Indic ↔ Indic
- TTS — Piper, offline voice
- Teacher corrections reused first
- Doubtful output flagged for review

STUDENT OUTPUT

- Santali audio + Ol Chiki text
- Hindi response heard by teacher
- Bilingual worksheet + flashcards
- Green / yellow / red comprehension signal
- NIPUN Lakshya-tagged; NEP §4.11

• Analysis of the feasibility of the idea

- **On-device today:** IndicConformer 120M (ASR), IndicTrans2 int8 (NMT) and Piper (TTS) run on the tablet in airplane mode. Open-source, CPU-only.
- **Published evidence:** Singh, Ekbal & Pakray (MMLoSo @ IJCNLP-AACL 2025): fine-tuned IndicTrans2 beats ByT5 for English ↔ Santali (Ol Chiki). We use the same family for direct Hindi ↔ Santali.
- **Benchmarks:** public test sets IN22-Gen, IN22-Conv, FLORES-200: Hindi → Santali chrF++ 31.3 / 32.2 / 27.4. A leakage guard keeps test sentences out of training.
- **Next:** Mundari translation preview built (LoRA on MMLoSo 2025 data; held-out chrF++ 30.92). Ho: voice only. Native-speaker review for all three.

Measured offline · tablet: **Realme Pad Mini** (4 GB, Android 11) · laptop hub

0.70 s

median voice-to-voice on the tablet,
lesson lines (p90 1.20 s; limit 3 s)

2.85 s

p90, free Hindi speech of ≤ 17 words
→ Santali audio, laptop hub

32.2 chrF++

Hindi → Santali, IN22-Conv public test
set (n = 1,503)

24 / 24

app checks pass on the tablet in
airplane mode

Potential challenges / risks → Strategies for overcoming them

Ho & Mundari have far less parallel data than Santali (already built)
→ lower initial accuracy

Low-end tablets vary in RAM, CPU speed and heat — the weakest
devices could exceed the 3-second latency limit

Processing children's voice data raises data-privacy concerns

Teachers with low digital literacy may resist adoption

LoRA on IndicTrans2 already gives a Mundari preview; add PALASH
textbooks, community recordings and teacher corrections

INT8 models on the tablet, lessons pre-translated at sync, spoken
lesson lines matched on-device, live latency readout

No cloud: speech stays on the tablet or school laptop; no child
names in reports; reading-check audio deleted

Hindi, Santali and English interface, 18 pre-loaded NIPUN lessons —
teachers start teaching, not configuring

IMPACT AND BENEFITS

• Potential impact on the target audience

DIRECT IMPACT & REACH

Built for PALASH's **1,041** MTB-MLE schools in 8 districts (JEPC) and the **5,000+** tribal-area primary schools named in the problem statement.

SCALABLE DEPLOYMENT PATH

Santali now; **Mundari** in preview; then **Ho**, a PALASH classroom pilot, all 24 Jharkhand districts, and Munda-language belts in Odisha, West Bengal and Bihar.

EDUCATIONAL FOUNDATION

Aims at the NIPUN Bharat goal: FLN by the end of Grade 3. Children learn to read and count in their home language first, then bridge to Hindi.

1,041

PALASH schools (JEPC, Jan 2026) — first deployment target

8 of 24

PALASH districts today → path to all 24

Rs. 0

Licence and cloud fees — open models, runs offline

18 lessons

every NIPUN Lakshya, Balvatika to Grade 3, with worksheets

Benefits of the solution (social, economic, operational, policy)

SOCIAL

Hindi-medium teachers can teach in the child's mother tongue — aims to lift comprehension before Grade 3

ECONOMIC

No licence fees or per-query cloud billing — IndicConformer and IndicTrans2 are MIT-licensed

OPERATIONAL

Offline on low-cost Android 9+ tablets, no new hiring; teacher corrections sync between tablets as signed files

POLICY

Supports NEP 2020 §4.11 (mother tongue), NIPUN Bharat FLN goals and SDG 4 (Quality Education)
